## LOW PROFILE BROADCAST BOOM

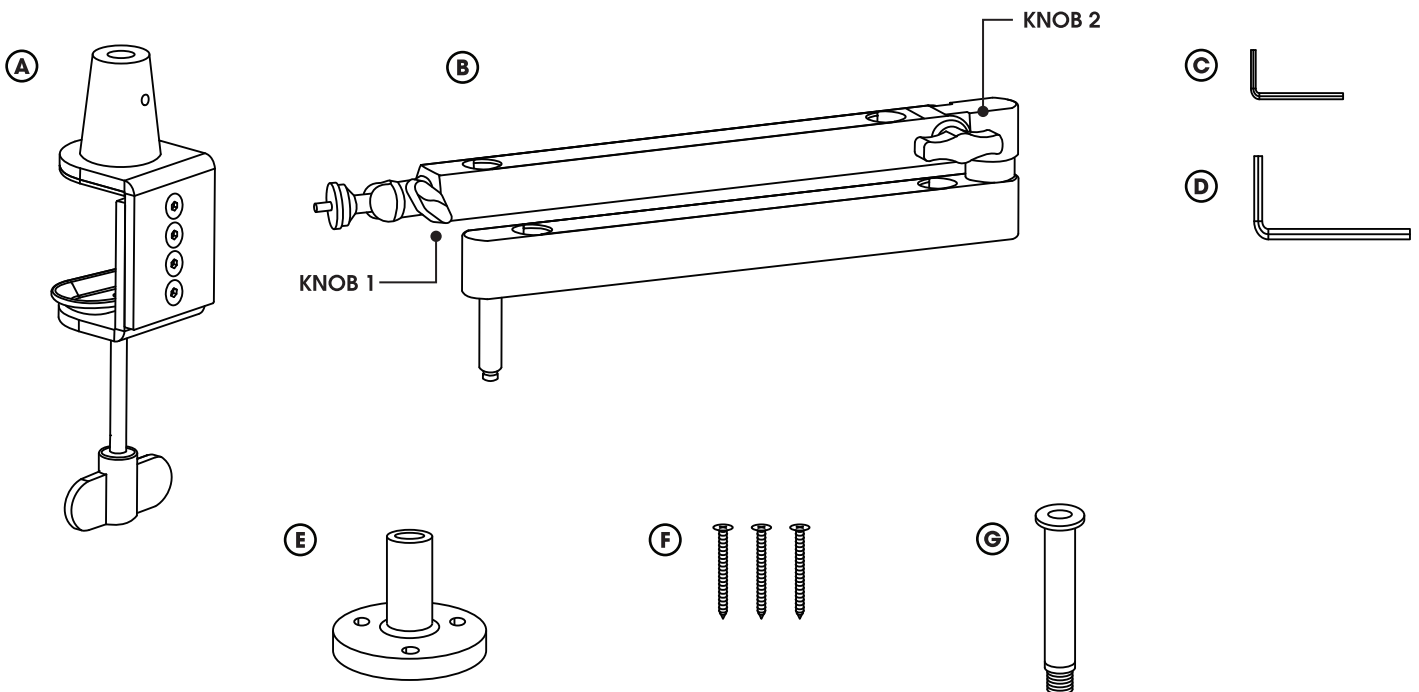

### ASSEMBLY INSTRUCTIONS

**GATOR  
FRAMEWORKS**

### GENERAL INTRODUCTION:

The Frameworks Low-Profile Broadcast Boom is designed for creators who need a professional mic arm that stays out of the way while delivering exceptional flexibility. Its low-profile design sits below the shoulder line, ensuring an unobstructed view of the podcaster or streamer on camera. Whether mounting to a desk with its secure clamp (fits surfaces up to 2.17" / 55mm) or using the thru-desk mount option, setup is quick and sturdy. Built for universal compatibility, this boom arm features a threaded extension adapter that allows proper XLR cable clearance and works seamlessly with popular mics like the Shure SM7 and MV7 series. With full 360° rotation and an extendable mic arm reaching up to 33" (838mm), it delivers smooth, silent movement for effortless positioning. The 90° upper vertical adjustment provides even greater flexibility, letting you fine-tune your mic placement with precision. Keeping cables neat and organized is simple, thanks to the built-in magnetic cable management system, which secures XLR or USB cables for a clutter-free workspace. Plus, it's compatible with both US and Euro-style mic clips, making it a versatile choice for any recording setup. Whether you're podcasting, streaming, or broadcasting, the Frameworks Low-Profile Boom Stand combines sleek design, silent operation, and professional performance to enhance your experience.

### COMPONENTS:

A. DESK CLAMP

B. BOOM ARM

C. S3 HEXAGON WRENCH

D. S4 HEXAGON WRENCH

E. DIRECT DRILL MOUNT

F. DRILL MOUNT SCREWS

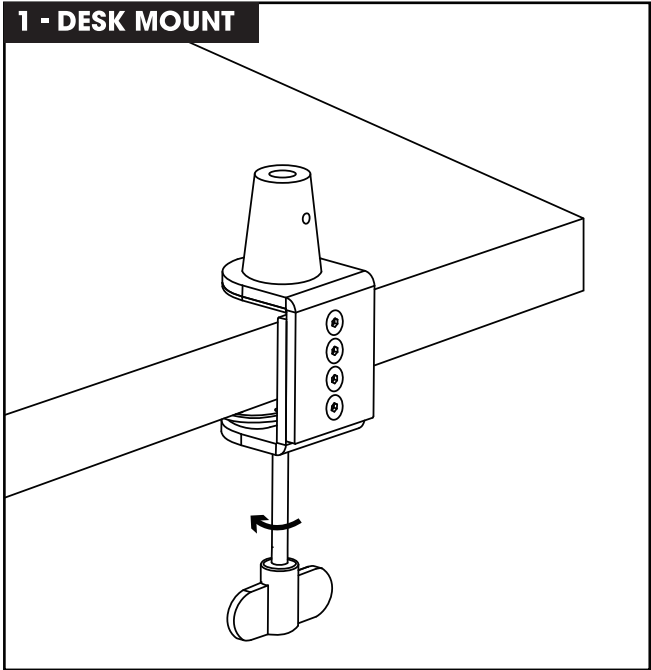

G. EXTENSION ADAPTER

FOR SM7 & MV7 SERIES MICS

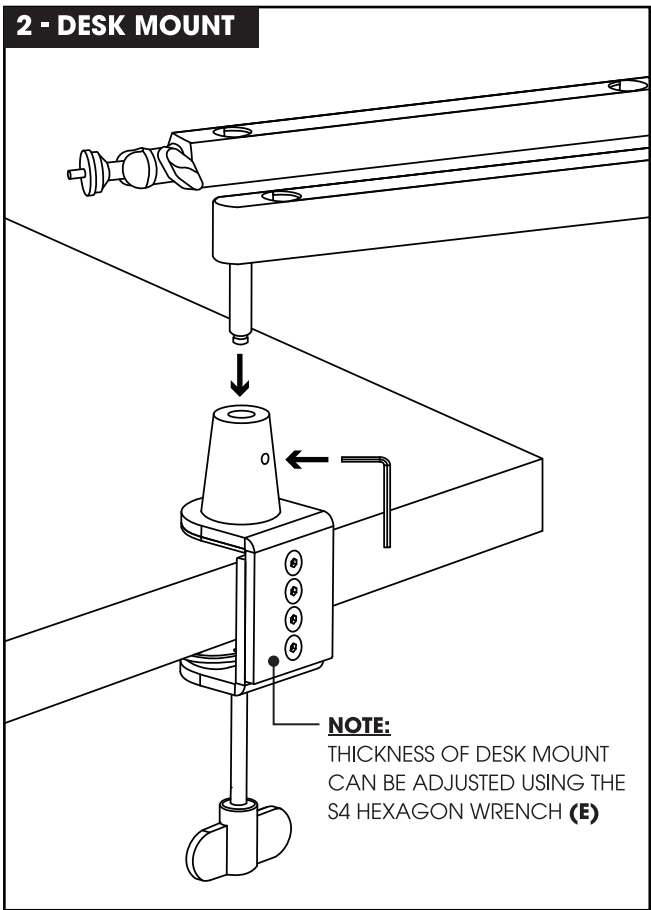

# INSTALLATION INSTRUCTIONS:

## DESK MOUNT OPTION:

- 1
- Secure desk mount (A) onto surface by twisting the handle until it is firmly tightened.

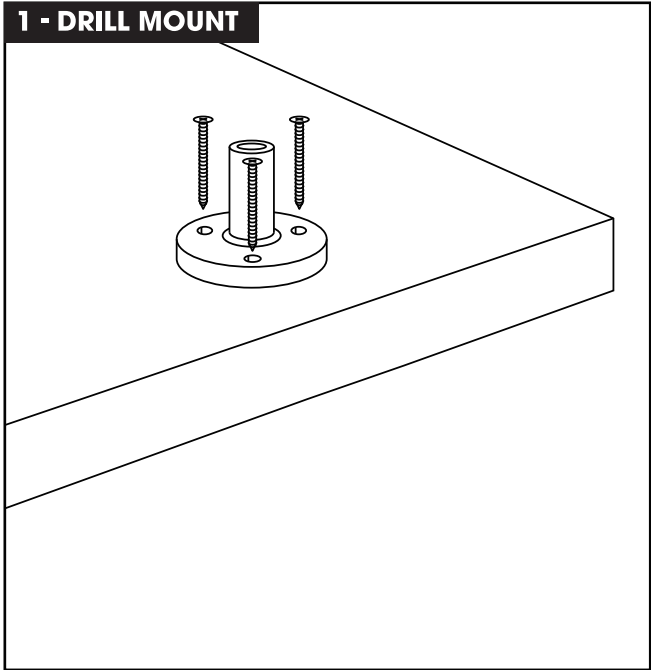

- 2
- Insert base of boom arm (B) into the desk mount (A) hole and fasten using the S3 hexagon wrench (C).

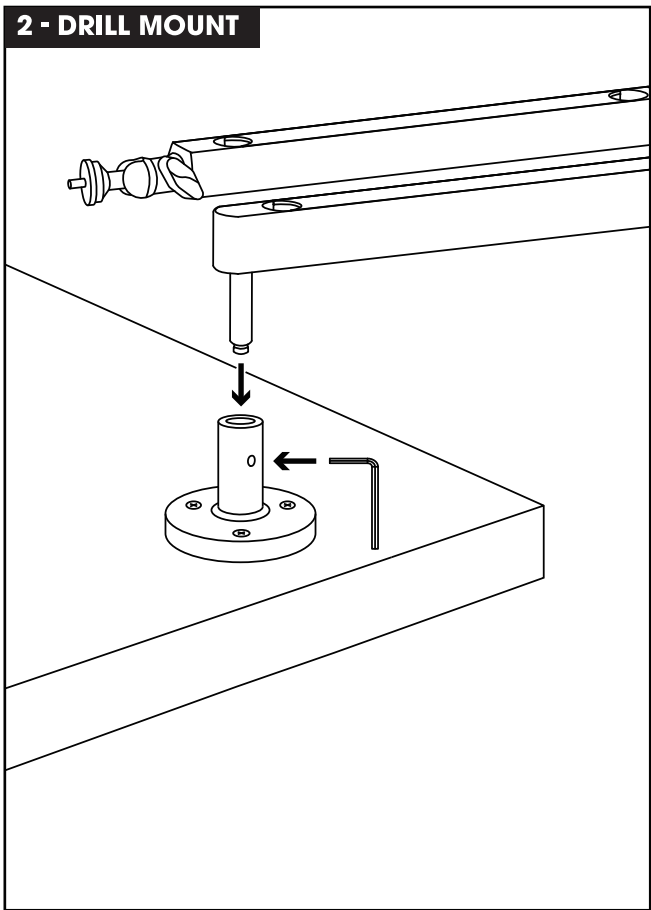

## DRILL MOUNT OPTION:

- 1
- Secure direct drill mount mount (E) onto surface using direct drill mount screws (F).

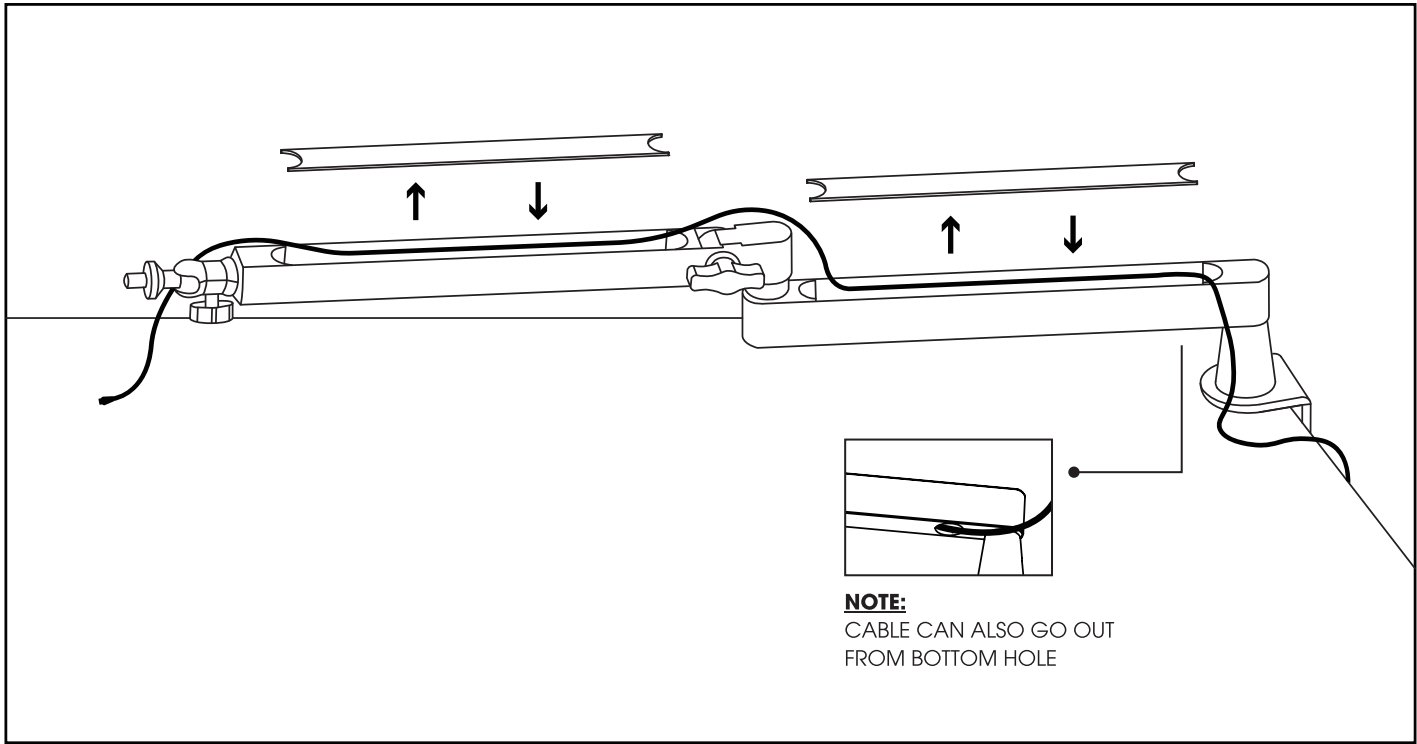

- 2
- Insert base of boom arm (B) into the direct drill mount (E) hole and fasten using the S3 hexagon wrench (C).

INSTALLATION INSTRUCTIONS:

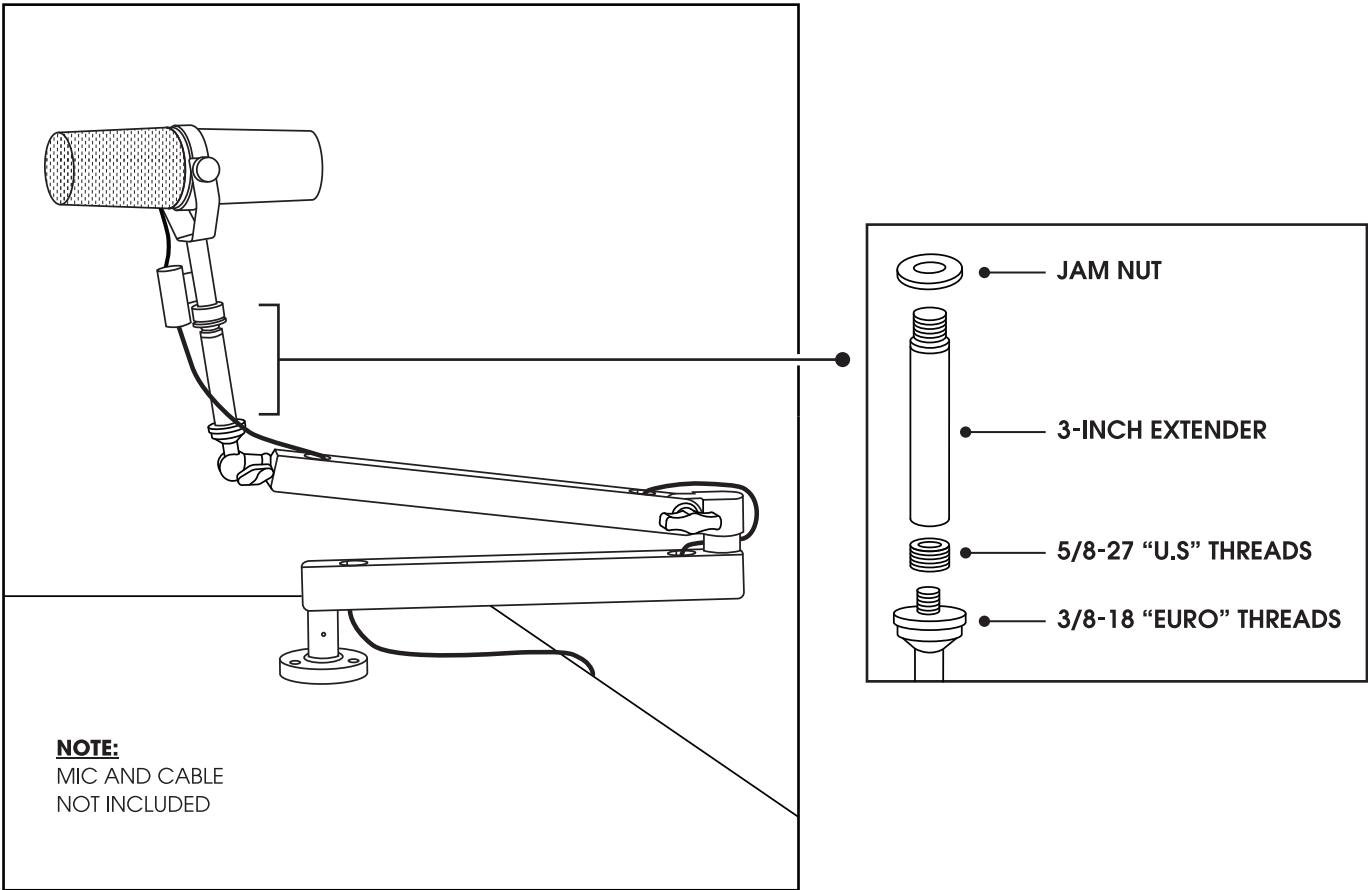

3

Remove magnetic cable cover and thread cable inside boom arm (B). Then secure magnetic cable cover back into position.

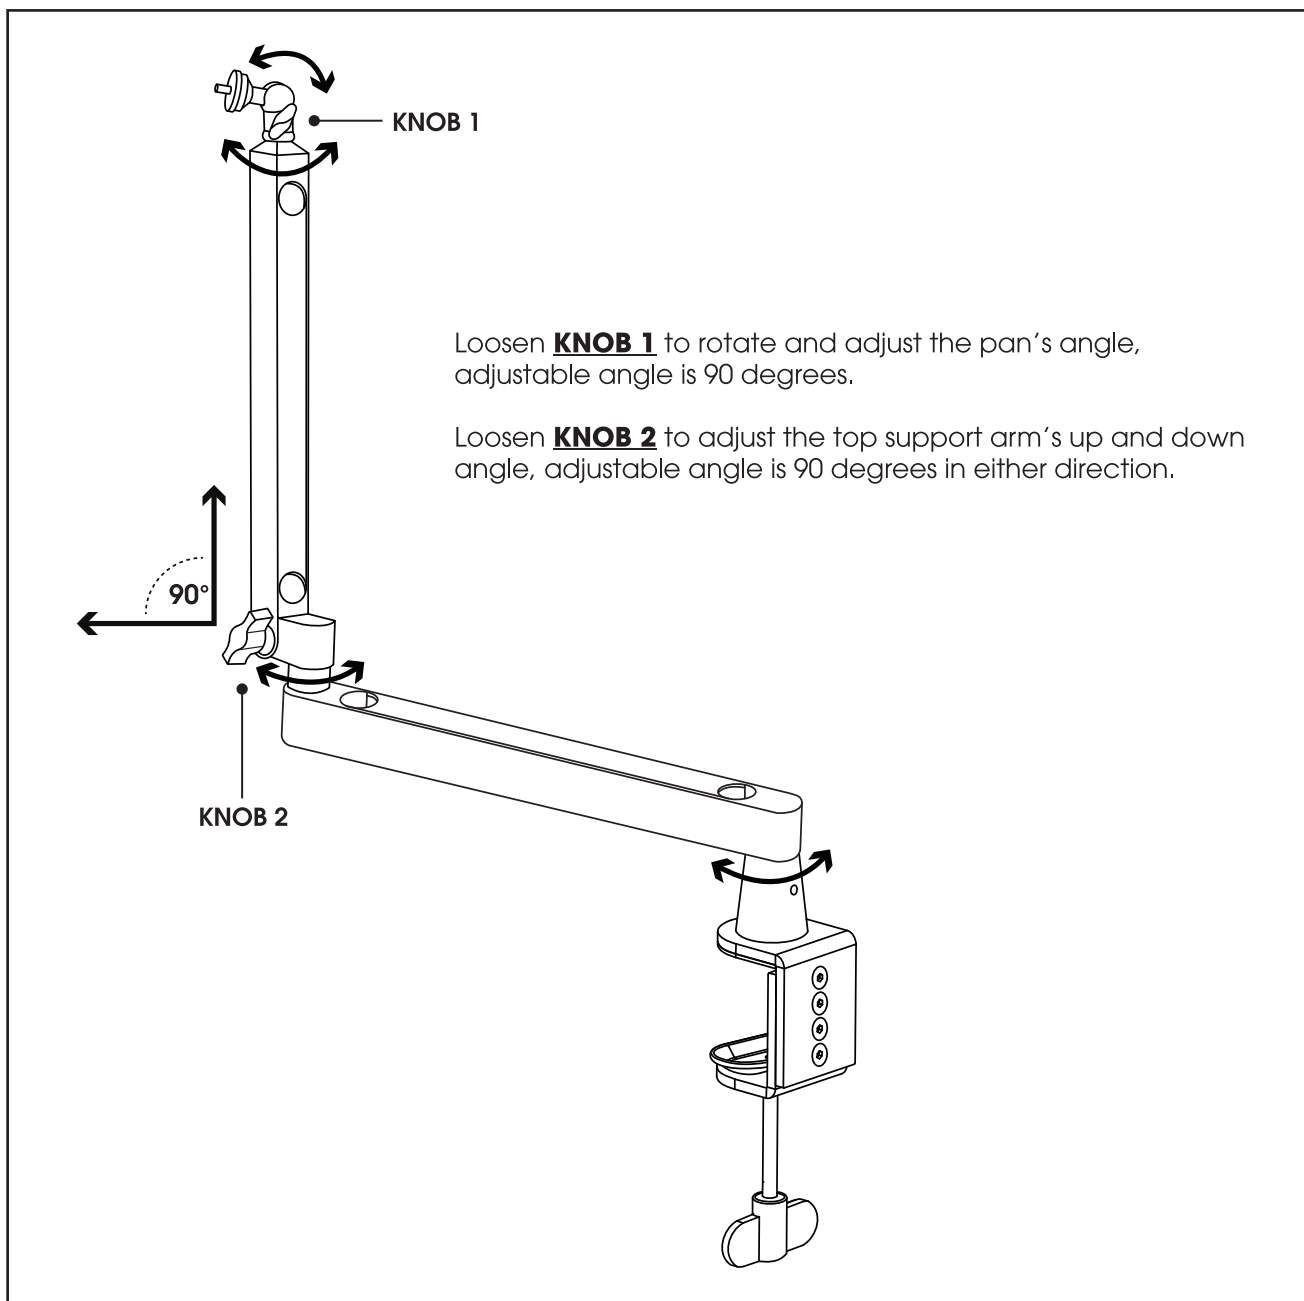

4

With KNOB 1 tightened to desired position, install your microphone. Note, that the SM7 series mics will require you to install the extension adapter (E) first as shown in the image below.

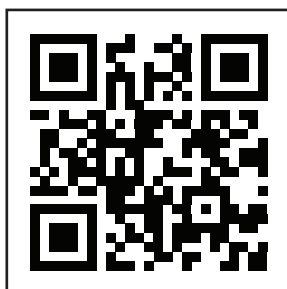

## PRODUCT APPLICATION:

## ENJOY USING YOUR NEW BOOM!
